**Sixth Edition

Preface

These Philippine Bidding Documents (PBDs) for the procurement of Infrastructure Projects (hereinafter referred to also as the “Works”) through Competitive Bidding have been prepared by the Government of the Philippines for use by all branches, agencies, departments, bureaus, offices, or instrumentalities of the government, including government-owned and/or -controlled corporations, government financial institutions, state universities and colleges, local government units, and autonomous regional government. The procedures and practices presented in this document have been developed through broad experience, and are for mandatory use in projects that are financed in whole or in part by the Government of the Philippines or any foreign government/foreign or international financing institution in accordance with the provisions of the 2016 revised Implementing Rules and Regulations (IRR) of Republic Act (RA) No. 9184.

The PBDs are intended as a model for admeasurements (unit prices or unit rates in a bill of quantities) types of contract, which are the most common in Works contracting.

The Bidding Documents shall clearly and adequately define, among others: (i) the objectives, scope, and expected outputs and/or results of the proposed contract; (ii) the eligibility requirements of Bidders; (iii) the expected contract duration; and (iv) the obligations, duties, and/or functions of the winning Bidder.

Care should be taken to check the relevance of the provisions of the PBDs against the requirements of the specific Works to be procured. If duplication of a subject is inevitable in other sections of the document prepared by the Procuring Entity, care must be exercised to avoid contradictions between clauses dealing with the same matter.

Moreover, each section is prepared with notes intended only as information for the Procuring Entity or the person drafting the Bidding Documents. They shall not be included in the final documents. The following general directions should be observed when using the documents:

- a. All the documents listed in the Table of Contents are normally required for the procurement of Infrastructure Projects. However, they should be adapted as necessary to the circumstances of the particular Project.
- b. Specific details, such as the “*name of the Procuring Entity*” and “*address for bid submission*,” should be furnished in the Instructions to Bidders, Bid Data Sheet, and Special Conditions of Contract. The final documents should contain neither blank spaces nor options.
- c. This Preface and the footnotes or notes in italics included in the Invitation to Bid, BDS, General Conditions of Contract, Special Conditions of Contract, Specifications, Drawings, and Bill of Quantities are not part of the text of the final document, although they contain instructions that the Procuring Entity should strictly follow.
- d. The cover should be modified as required to identify the Bidding Documents as to the names of the Project, Contract, and Procuring Entity, in addition to date of issue.
- e. Modifications for specific Procurement Project details should be provided in the Special Conditions of Contract as amendments to the Conditions of Contract. For easy completion, whenever reference has to be made to specific clauses in the Bid Data Sheet or Special Conditions of Contract, these terms shall be printed in bold typeface on Sections I (Instructions to Bidders) and III (General Conditions of Contract), respectively.
- f. For guidelines on the use of Bidding Forms and the procurement of Foreign-Assisted Projects, these will be covered by a separate issuance of the Government Procurement Policy Board.

2. If so, numerical indications appear in the plans, all drawings shall be careful follow according to the scale of the drawing, but if they are not indicated, the numerical rotations must be followed and not the scale of the drawing and specifications, specifications shall govern. In case of discrepancies of the figures or drawings the matter shall be immediately submitted to the project-in-charge before any adjustments shall be made.
3. The owner, contractor or workmen without prior agreement or approval, no changes in the drawing and specifications shall be made.

C. PREPARATION OF THE SITE

Nonperishable material may be disposed off outside the limits of view from the project with written permission of the property owner on whose property the material is placed. Copies of all agreements with property owners are to be furnished to the Engineer. Basements or cavities left by the structure removal shall be filled with acceptable material to the level of the surrounding ground and, if within the prism of construction, shall be compacted to the required density.

ITEM 628 (1)a WATERPROOFING OF DECK SLAB

A. "Catalytic" In-depth Crystalline Waterproofing: Blend of portland cement, fine treated silica sand and active proprietary chemicals. When mixed with water (or a flexibilizer) and applied as a coating layer, the active chemicals in the coating layer penetrate the concrete substrate and cause a catalytic reaction which generates a non-soluble crystalline formation of dendritic fibers deep within the pores and capillary tracts of concrete. This process causes concrete to become permanently sealed against the penetration of liquids from any direction. Two product versions of "Catalytic" In-depth Crystalline Waterproofing are available, i.e. Cementitious and Flexible-Matrix. The Flexible-Matrix version is preferred over the Cementitious version, due to its elongation characteristics and additional virtue of forming a membranous barrier around the concrete to which it is applied.

B. Membrane Waterproofing :

(1) Pre-fabricated APP/SBS Modified Polyester Re-inforced Bituminous Membrane: having UV resistance, underground ground-chemical resistance, high melting points, flexible and elastic with high adhesive strength. The membrane shall be reinforced with a layer of non-woven polyester fabric of minimum 180 g/sqm or composite reinforcement of minimum of 175 g/sqm and reinforced with glass fibre grill of 8 g/sqm. The upper surface is finished with calibrated granules of 1 mm, pressed mechanically into the bitumen. The under surface is finished with a polyethylene foil of 12 micron thickness. The total membrane thickness is 4mm and minimum weight 4.2 to 4.5 kg/m² including coating with compatible primer of bituminous base and torch application with overlap of 70 - 100 mm wherever required. The reinforcement provided shall be able to withstand the traffic flow density and shall include necessary protection layer of either colour slates / granules / 18 mm thick thermocole / aluminium foil as approved by consultants, etc.

(2) Liquid-applied, Water-Based, Elastomeric Polyurethane Membrane : having UV resistance, underground ground-chemical resistance, high melting points, flexible and elastic with high adhesive strength. The membrane shall be reinforced with a layer of non-woven polyester fabric of minimum 40 g/sqm. The upper surface shall be finished with 8-12 sieve quartz sand which shall be sprinkled on to the final wet layer of the liquid applied membrane, to provide 'keying' to the subsequent protective cementitious layer of concrete screed / plaster as specified in the BOQ. The total membrane thickness shall be as specified by the manufacturer's technical literature but not less than 1.5 mm and shall be applied in 3 coats.

C. Acrylic Polymer-Modified Flexible Cementitious Membrane / Coating : having UV resistance, underground ground-chemical resistance, high melting points, flexible and elastic with high adhesive strength. The membrane shall be reinforced with a layer of non-woven polyester fabric of minimum 30

P2

g/sqm. The Acrylic Polymer-Modified Flexible Cementitious Membrane / Coating shall be protected with a subsequent protective cementitious layer of concrete screed / plaster in thickness as specified in the BOQ. The total coating thickness shall be as specified by the manufacturer's technical literature but not less than 1.5 mm and shall be applied in 2 - 3 coats.
